Introduction

With a current population of approximately 107 million people, land area spanning over a million square kilometers, and the different climates and locations the population lives in, ranging from the Mediterranean to South, Egypt is bound to have an Inequality within its residents.

Inequalities, such as a huge gap in income, unequal opportunities and job market share, the living conditions of residents in rural areas in comparison to the more urban points of the country, as well as the discrimination against certain groups of people, especially women, have been a huge factor in the well-being of all Egyptians, and also affects their wealth, education and other social outcomes.

Goal 10 of the Sustainable Development Goals (SDGs) aims to reduce all sorts of inequalities by setting a set of individual targets to be achieved within a country, that all contribute to the Inequality present. These targets Include, but are not limited to:

1- Increasing the income rate of the bottom 40% of the population

2- encourage all individuals to contribute to all social and economic fields, regardless of their gender, age and ethnicity

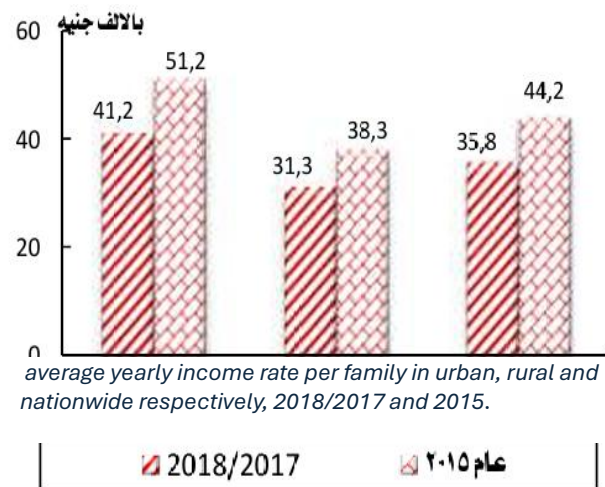

3- Promote appropriate action and legislation towards ongoing discrimination and harassment

4- Provide financial help for affected families, as well as poor and remote villages.

5- provide equal education and healthcare for all

6- improve the regulation of global financial markets and institutions

The graph above shows the yearly income rate of residents of rural areas in comparison to more urban areas in Egypt, which hints at various differences between the lives of the upper and lower Egyptians. This report aims to discuss the efforts of different countries towards said targets to reduce inequality, as well as the work being done and what could be

done in upper egypt , more specifically Asyut, for their residents to match the living conditions of the lower part of the country.

Vision of Egypt 2030 (رؤية مصر 2030):

Vision of Egypt 2030 reflects the strategic plan of the state to achieve sustainable development in all fields, specifically the economic, social and enviromental development.

One of the goals put by Vision of egypt is to improve the quality of life for the egyptian citizen, with the means of:

- Arranging a system for social protection
- Making high quality education and healthvare available everywhere
- Improving the infrastructure of egypt

1- Increase the income of the bottom 40% of the population

When economists or policymakers talk about "increasing the income rate of the bottom 40% of the population," they are referring to strategies aimed at boosting the earnings and economic well-being of the poorest 40% of people in a society. This is a key focus in discussions about reducing income inequality because the bottom 40% often struggles with low wages, limited job opportunities, and financial instability.

Why Focus on the Bottom 40%?

1 - High Inequality Harms Economic Growth

When wealth is concentrated in the top 10% or 20%, the rest of the population has less purchasing power, which can slow down economic growth.

The bottom 40% spends most of their income on necessities, so increasing their earnings stimulates demand in the economy.

2- Social and Political Stability

Extreme inequality can lead to social unrest, crime, and political instability, Ensuring that the poorest see income growth helps maintain social cohesion.

3- Poverty Reduction

Many in the bottom 40% live near or below the poverty line. Raising their incomes directly reduces poverty rates

How to Increase the Income Rate of the Bottom 40%?

1. Minimum Wage Increases

Raising the minimum wage is a measure aimed at ensuring that low-wage workers receive better compensation for their efforts. This policy helps increase the earnings of individuals who are often struggling to make ends meet. By earning more, these workers can improve their quality of life, affording essential needs such as food, housing, healthcare, and education. It also helps to reduce poverty, as many people in low-income brackets gain access to higher disposable incomes.

2. Education & Skills Training

Many people in the bottom 40% don't have access to good education, which limits their ability to get better jobs. Vocational training can teach specific skills for jobs like electrician or nurse, helping them find work. Scholarships can cover education costs, making learning more accessible. Adult education programs can help grown-ups improve basic skills like reading and math or learn new ones. These steps help people gain better opportunities and higher-paying jobs. It's about opening doors to a better future.

3. Labor Market Reforms

Labor Market Reforms aim to improve job opportunities, wages, and working conditions, particularly for low-income workers. Key measures include strengthening unions to boost collective bargaining power and raising minimum wages to ensure fair pay. Reforms also focus on job security (e.g., reducing unfair dismissals) and social protections (e.g., paid leave, healthcare benefits). Skills training programs help workers adapt to automation and globalization. However, critics argue that excessive regulation may reduce hiring flexibility. Successful reforms, like Germany's Hartz policies, balance worker rights with business competitiveness to reduce inequality.

Why does it matter?

When everyone is given equal opportunities, society benefits as a whole. Diverse workplaces, schools, and leadership teams bring different ideas and perspectives, leading to better decisions and progress.

By combining legal actions, education, and representation goals, we can create a fair and inclusive society for everyone.

Successful Examples:

- Brazil (2000s): Bolsa Família reduced poverty by giving cash to poor families if they kept children in school.
- South Korea (1960s-90s): Heavy investment in education helped lift millions into the middle class.
- Rwanda (Post-1994): Land reforms and women's empowerment boosted incomes for the poorest.

2- encourage everyone to contribute to all economic and social fields

Work is important for the members of society because it achieves security and prosperity. Therefore, we must call for reducing inequality in work and income

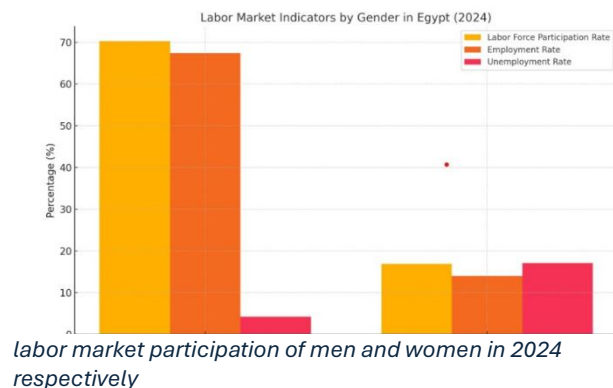

There are some problems appear in Egypt in terms of inequality in employment, especially in Upper Egypt, as shown. and some suggestions for solving them include:

First: wage inequality

1. Gender Pay Gap:

there is a big difference in the average income of men compared to women in Upper Egypt

Generally Low Wages: there is also a difference in the wages between urban cities and Upper Egypt, which led to the migration of some citizens in Upper Egypt to urban cities

- o **Lack of Transparency in Wage Determination:** The absence of clear and transparent criteria for determining wages can create opportunities for discrimination based on gender or favoritism.

2. Inequality Based on Gender:

- o **Unequal Distribution of Jobs:** Women might be concentrated in specific jobs considered "suitable" for their nature (such as teaching, nursing, and domestic work), while men dominate other sectors like industry, construction, and leadership. This stereotypical distribution limits the choices of both genders and reduces diversity in workplaces.

- **Difficulty in Accessing Leadership Positions:** Women may face greater difficulties in promotion and reaching

leadership positions due to cultural biases and social expectations that favor men in these roles.

- **Harassment and Unsafe Environments:** Women in some work environments may experience harassment or unsafe working conditions, hindering their progress and affecting their ability to contribute effectively.
- **Ignoring the Needs of Working Women:** Some workplaces may not provide facilities or policies that consider the needs of working women, such as adequate maternity leave, childcare support, and flexible working hours.

3. Inequality Based on Abilities (People with Disabilities):

Limited Job Opportunities: People with disabilities in Upper Egypt face significant difficulties in obtaining suitable job opportunities that align with their abilities and skills. There might be a lack of awareness of their capabilities or biases against them.

Lack of Workplace Accessibility: Many workplaces are not equipped to accommodate employees with disabilities in terms of accessibility, facilities, and assistive technology.

Discrimination in Wages and Promotion: Even when people with disabilities secure jobs, they may face discrimination in wages and promotion opportunities compared to their non-disabled colleagues.

Lack of Support and Rehabilitation: There might be a shortage of rehabilitation and vocational training programs specifically designed for people with disabilities to help them acquire the necessary skills for the labor market.

Second: Some Suggestions for Resolving These Problems:

1. To Achieve Wage Equality:

Effective Implementation of Equal Pay Laws: Laws ensuring equal pay for men and women for work of equal value must be effectively enforced.

Promoting Transparency in Wage Determination: Companies and institutions should establish clear and transparent criteria for determining wages and disclose them to ensure fairness, Making the average wages between Egypt's governorates relatively close

Conducting Periodic Wage Surveys: Conducting periodic wage surveys at the Upper Egypt level can help identify wage gaps and develop plans to address them.

Economic Empowerment of Women: Supporting small and medium-sized enterprises led by women and providing them with the necessary training and qualifications can increase their ability to obtain fair wages.

2. To Achieve Gender Equality:

Challenging Stereotypes: Launching awareness campaigns to change stereotypes about gender roles in the workplace and encourage women's participation in all sectors.

Activating Anti-Discrimination and Anti-Harassment Laws: Clear laws criminalizing discrimination and harassment in the workplace must be in place and strictly enforced.

Supporting Women's Access to Leadership Positions: Implementing training and mentorship programs for ambitious women and removing obstacles they face in career advancement.

Providing Family-Friendly Work Environments: Encouraging companies to provide paid maternity leave, childcare support, and flexible working hours to enable women to balance work and family life.

Promoting Women's Participation in Non-Traditional Sectors: Offering training programs and incentives to encourage women to work in sectors traditionally dominated by men.

3.To Achieve Equality Based on Abilities:

Activating the Law on the Rights of Persons with Disabilities: The law guaranteeing the rights of people with disabilities in employment must be activated and the quota system in hiring implemented.

Making Workplaces Accessible: Providing incentives for companies and institutions to make workplaces inclusive and accessible to people with disabilities.

Providing Vocational Rehabilitation and Training Programs: Establishing and developing specialized vocational rehabilitation and training programs for people with disabilities to develop their skills and meet the needs of the labor market.

Awareness Campaigns: Launching awareness campaigns to increase understanding of the abilities of people with disabilities and change negative stereotypes.

Supporting Entrepreneurship: Encouraging and supporting people with disabilities to establish their own businesses and providing them with the necessary funding and guidance.

Achieving equality in employment in Upper Egypt requires integrated efforts from the government, the private sector, civil society, and individuals. By addressing these problems and implementing these suggestions, a more just and equitable work

environment can be created for everyone, contributing to the comprehensive development of the region."

based on various global indicators that measure equality in the workplace, **Iceland** is generally considered the most advanced country in addressing issues of inequality in the workplace, whether regarding wages, gender, or people with disabilities

A proven track record in gender equality: Iceland has topped the World Economic Forum's Global Gender Gap Index for many consecutive years. It has implemented effective laws and policies to reduce the gender pay gap, increase the representation of women in leadership and political positions, and provide generous parental leave for both parents.

Equal Pay Law: In 2018, Iceland became the first country in the world to make it illegal to pay men and women different wages for the same work or work of equal value, unless the difference can be justified by objective factors. This law represents a bold step towards achieving equal pay.

Attention to people with disabilities: Although the primary focus is often on gender equality, Iceland pays increasing attention to integrating people with disabilities into the labor market and providing inclusive and accessible work environments. There are laws and policies aimed at combating discrimination and providing the necessary accommodations to enable their full participation in economic life.

Culture of equality: There is a strong societal awareness of the importance of equality and widespread support for policies that promote it. This societal support plays a crucial role in the success of these policies.

3- Promote appropriate action and legislation towards ongoing discrimination and harassment

It is with no doubt that among the 107 million residents in Egypt, some will experience discrimination or harassment of some sort, and Egyptian women take most of the cake here, as Egypt faces a very serious problem regarding the unequal payment of women in comparison to men, as well as the very high rate of domestic violence, sexual harassment, and the general verbal and physical abuse women face daily.

According to the Central Agency for Public Mobilization and Statistics (CAPMAS) , in 2023, it is found that the employment rate of men stands at 84.2% while women's employment rate is just 15.8%. Meanwhile, the unemployment rate of men was 4.7% when women unemployment rate is significantly higher at 17.8%.

this staggering gap is expected to be higher in rural parts of the country and Upper Egypt, as women are denied jobs and are being more encouraged and sometimes forced into marriage, as suggested by the rate of marriages and divorces done per one thousand people in 2023; for every 8.6 marriages in urban Egypt, there is 9.5 in rural Egypt, and for every 3.3 divorce cases in urban areas, only 1.9 happen in rural areas. This does not imply a better quality of life for married people, but the fact that divorce from unsuccessful and potentially harmful marriages are hard to happen and can lead to the harm of women's wellbeing and sometimes escalates to physical violence.

Women are hence directed to more martial work, such as housework, taking most care of her children and "the service of her husband" under the name of traditional and cultural values, which are more strongly present there, implying the **prevalent social pressure** on women coming from respective relatives and society.

Egyptian streets isn't particularly safe for women either, as the crisis of harassment – either verbally or physically – is not only still rampant, but also increasing at an alarming rate. According to The Egyptian Center for Women's Rights (ECWR), the crimes done against women (which evolved to murder in recent years) usually happen in public spaces, such as universities and workplaces. Given also the fact that most of these crimes against women do not get reported to authorities, due to social factors, the problem continues to grow.

Discrimination and harassment against women remains prevalent due to several reasons. Which, according to the ECWR, include:

- Men are raised to control and suppress women, under the guise of "honor".
- There is a visible stigma regarding divorce and reporting harassment and the crimes related to it, which is fueled by the culture and society within.
- Inadequate legal penalties for such crimes, which often gives little to no punishment for these perpetrators, resulting in an increase of rate of harassment and discrimination.

Oftentimes, the unjust treatment that women receive falsely fall under the name of Islam, as seen with countries like Afghanistan and Iran, and even though Islam calls for equity over pure equality (as each gender has their needs), the current state of Egypt does not achieve either of that; neither do women have equal opportunities like men, nor is their overall quality of life and wellbeing as good as men.

Fortunately, Saudi Arabia, a neighbouring Islamic country has seen major improvements in the lives of women, ranging from job opportunities, participating in social activities, and their safety. Proving that the source of these traditions that are against women are not related to religion, but to backwards, outdated culture.

Saudi Arabia's Vision 2030:

Vision 2030 Is a government program that was launched by Saudi Arabia in 2016, which has brought some key changes on the participation of women and people with disabilities in the job market, as well as their protection.

Statistics from the [Vision 2030](#) website show that women now participate in 33.5% of the labor market, from the baseline of just 22.8%. also, now 13.4% of people with disabilities have the chance to work, when it was only 7.7%.

To do this, Saudi Arabia had to first tackle the laws in place that hindered the progress of women, as well as implement new reforms that aid everyone. They include:

- Ending the driving ban imposed on women in 2018.
- Relaxing their male guardianship system, which allows women to more freely Travel and use government services.
- Encouraging women to participate in politics and run for office.
- The Rights of Persons with Disabilities Act in 2023, which prohibits discrimination against people with disability, as well as ensuring their right to education, employment and criminalizes the neglect and abuse of those with special needs, with severe punishments.

How can we ensure the safety, comfort and involvement of all in Egyptian labour and society?

Although the laws regarding women and people with disabilities aren't as strict as in Saudi Arabia, most of the discrimination and harassment comes from the society within. This is due to the wrong basis on which Egyptian men and women are raised on from childhood, alongside the fear that comes with reporting serious crimes done against women as mentioned above, both of which are much more prevalent in upper Egypt.

So, to combat this, Egypt needs to redefine the image of gender roles in the upper Egyptian life in Asyut, where its population is mostly rural, by:

- **Educate** families and male individuals about the struggle that women face on a daily basis, and emphasize the effects they have on their lives.

Some effort was done via Egyptian mainstream media, where work ranging from government funded campaigns to cinematic TV shows is made for the purpose of narrating the daily life of the Egyptian woman.

- **Eradicate** the backwards traditions that life in rural upper Egypt is built upon, and urge families and communities to adopt a new system.

Most discrimination that women face is a symptom of the outdated traditions that many families in rural Egypt are raised on, and while it is difficult to make an effective change in the way women get treated in such a close-minded community, some effort must be made in order to make the situation better for families.

- **Enforce** stricter laws regarding crimes against women ranging from domestic abuse to harassment, which include real consequences for criminals. And also
- **Erase** the fear of reporting such crimes to the authorities due to social stigma

The reason that a lot of Egyptian women face such harassment can also be allocated to the fact that a lot of these crimes do not get reported due to lack of privacy and the subsequent verbal harassment (typically on social media) that they get exposed to. And those who do get accused of being criminals of harassment often do not get adequate punishment due to the sheer lack of law enforcement in rural areas, which may lead to them being repeat offenders.

- **Encourage** the Egyptian woman to work by reducing the gender pay-gap and by ensuring the safety of workplaces and public areas.

This is to decrease the high rate of forced marriages - some of which happen at a young age - in rural areas, and to instead divert women into becoming more self-independent and to have a chance of building their own careers.

On the flipside, we need to provide a better life for people with special needs, especially in areas like Asyut where it lacks an infrastructure friendly for them. It's as simple as ABC:

- **Advocate** for the better treatment of people with visible physical and mental disabilities, as they face harsh bullying early in life in areas such as schools and later on in workplaces, which affects their mental health severely
- **Build** more accessible essential functions including governmental venues and markets, as well as public transport and roads that make transportation easier for people in need.
- **Create** more job opportunities for people with special needs, and evaluate them for the job market. Also, add consequences for leaving out people with disability out of work due to pure discrimination and bias.

Recent contributions of everyone in science and sports:

Egypt has improved so much in the past years regarding discrimination against women and people with disabilities

Women have been thriving in a lot of fields; there are judges, doctors, engineers and even astronauts, which is not easy to achieve even for a man. As an example, we can take Sara Sabry, the first Egyptian female astronaut. She graduated from the AUC

mechanical engineering (mechatronics) and became the first Egyptian Astronaut, and the first African woman and first Arab woman to reach space. Sabry was selected by Space for Humanity to go on a mission to experience the Overview Effect, and bring that back to Earth.

Sabry was selected as the world's second Citizen Astronaut out of thousands of applicants from all over the world, and her seat to space was fully sponsored by both Space for Humanity and Blue Origin.

In early 2021, Sabry became Egypt's first female Analog Astronaut after completing a 2-week moon mission.

Regarding the disabled people on the year of 2018 the president Abdelfattah ElSisi has taken an action regarding the disabled people and made this a year the year celebration of "differently disabled" of the and made it a year to year event where he host people from all over the world to see what progress we made about them this has encouraged the people and social media to focus on the case and as an example let's take rahma Khaled, which was the first Egyptian representer and defied every obstacle to be on the same level. but with different challenges egupt also participated in the Paralympics and won medals

To sum up: yes, Egypt has made a lot of progress, but the sky is the limit. Even though the women and people with disability have thrived on the past few years, we want to do more

The Egyptian series and mass communicaton has also put out the issues and problems that face a lot of women and they make a really positive impact on society in general.

4- Provide financial help for affected families, as well as poor and remote villages.

light of a significant gap between the services provided in urban and rural areas in Egypt, there is a pressing need for targeted financial assistance to support impoverished families and remote villages.

We will focus our efforts on a village in the Giza Governorate—specifically, the village of Abu Sir—where we observe a substantial disparity in the quality of services compared to urban areas.

Therefore, the following measures must be taken:

1. Improving Infrastructure

- Enhancing access to the water supply network.
- Upgrading the electricity grid to reduce power outages.
- Improving the sewage network and lining irrigation canals.

2. Supporting Education

- Establishing a secondary school.
- Increasing the number of literacy centers.
- Hiring more teachers.

3. Strengthening the Local Economy

- Supporting small-scale projects to reduce poverty rates and increase job opportunities.

4. Backing Government Initiatives

- Such as the "Decent Life" initiative, by injecting funds to finance its activities in the village.
- Creating a local fund to monitor needs and allocate funds fairly.

Thus, the village of Abu Sir is not merely an example of developmental neglect but an opportunity to test the effectiveness of targeted financing in achieving justice. Financial assistance is not a handout but an investment in marginalized communities and geographies, fully aligning with the Sustainable Development Goals.

To discuss a tangible program that has successfully assisted impoverished and vulnerable families, we must look again at *Bolsa Família*, implemented by Brazil in 2011, which significantly reduced poverty rates and improved education and health indicators. The program's concept involved providing monthly cash transfers to poor families under

certain conditions, such as ensuring children regularly attended school and received vaccinations and healthcare (especially for pregnant women and children).

Implementation Mechanism:

1. Accurate Identification of Beneficiaries
2. Use of a National Database (Cadastró Único) to register poor families and assess their needs.
3. Regular Reviews to Exclude Ineligible Recipients
4. Funding through government budgets supported by taxes, with transparent spending.
5. Distribution via direct cash transfers through prepaid cards.

Tangible Results

1. A 28% reduction in extreme poverty over 10 years.

2. Improved Education Rates:

- A 36% decrease in school dropout rates.
- A noticeable increase in academic achievement.

3. Enhanced Health Outcomes:

- A 58% decline in child mortality.
- Increased vaccination coverage.

4. Women's Empowerment:

- 93% of program beneficiaries were women (funds were disbursed to female heads of households to ensure investment in priorities).

Due to the program's success, it was expanded to include remote villages, such as those in the Amazon and isolated regions, through:

- Local agents distributing cards in areas without banking access.
- Providing mobile health and education services.

5- providing equal healthcare and education for all

We will now talk about the health and educational problems experienced by rural villages in our dear homeland, and we will mention how the state seeks to achieve

equality in the quality of education and integrated health care between villages and urban areas.

Education is one of the most important pillars on which society is based, as they say, "food for the mind," so it is not permissible to neglect it or care about some at the expense of the other in order not to cause a huge social problem. Likewise, health care is an important element in society to prevent the spread of diseases and epidemics and to preserve the lives of sick and healthy people.

The aim of this is to create opportunities for all social levels and to achieve justice and equality among these individuals, and also to provide health care for all human beings and not to discriminate between them.

Asyut Governorate (like other governorates in Upper Egypt) has historically faced several educational challenges, including:

High Illiteracy Rates:

Assiut recorded the highest illiteracy rate in Egypt in 2017: 34.6%, significantly higher than the national average. This phenomenon is also more prevalent among females due to parental ignorance (partly a result of the lack of interest in education in Egypt). Of course, the illiteracy rate in rural areas is much higher than in urban areas.

Poverty and Economic Factors:

High poverty rates in Asyut contribute significantly to educational problems. Families may force their children to work "due to poverty" and drop out of school. This is the starting point for the troubles of ignorance. Once the family has the means to earn money, they force their children to attend school, too. But it's too late. Children may hate education, not to mention their lack of understanding of lessons due to their lateness, and they may begin to skip school.

School Dropout Rates:

Assiut Governorate has witnessed varying high dropout rates across all educational levels, with primary school being lower than preparatory school. High dropout rates were recorded for preparatory school between 2019 and 2021, the highest rate in the country.

Quality of Education:

Overcrowded classrooms are a significant issue, likely exacerbated by limited resources and a growing population. The number of teachers was low in Assiut, and this was due to the lack of training programs for teachers.

Other Challenges:

Some parents may prohibit their children from attending school due to social or cultural factors. There's a noted disparity in educational attainment between genders. It's important to acknowledge that the Egyptian government and various organizations are working to address these challenges through initiatives aimed at improving access, quality, and reducing illiteracy rates across the country, including in Assiut.

There are many challenges that Assiut Governorate suffers from and seeks to discover a solution to them, and one of these challenges is "maternity care", where the Center of Excellence for Maternal and Child Health was established in the village of Bani Muhammadiyat, which is located in the Abanoub Center in Assiut Governorate many years ago, and this was neglected for years, as it was suffering from a shortage of devices, equipment and services for a long time, which affected (maternity care, newborn care). The center was developed and opened in January 2025 and needed to renovate it at a total cost of about EGP 40 million, and includes advanced equipment such as: nurseries, operating rooms and specialized care departments.

The Current Situation of Education and Health in Assiut:

Education:

Too many students in some schools make learning and teaching harder. Many schools really need better buildings and fixing. Also, it's hard for education to give students the skills that jobs need. Even with these problems, Assiut has a famous university, Assiut University, which is very important. There are different kinds of schools (government, private, language), and people are trying to make the lessons better and train teachers.

There are some key problems that education in Assiut is facing, including:

- Weak buildings in some public schools.
- Too many students in classrooms.
- Not enough supplies and tools.
- Teacher training is not always helpful.
- Education doesn't always match job needs
- Some students don't understand why education is important.
- Hard to get internet in some schools.
- Not enough teachers in some subjects.

Health:

Government hospitals have too many patients, which is a big strain. Health services need to be spread out better to reach villages more. Also, they always need more help, like doctors, equipment, and medicine. Assiut has Assiut University hospitals, which are a main medical center. Different health services are available. They also have medical trips to help people in far-off areas, and there are efforts to improve the hospitals.

Obviously, there are also problems with healthcare in Asyut, most notably:

- Too many patients in government hospitals.
- Health services are not spread out well.
- Not enough medical staff in some areas and jobs.
- Not enough medical equipment and supplies.
- Need to make basic health centers better.
- People don't always know enough about health.
- Hard to keep track of medicine and staff.

How Turkey and European Countries Raised the Level of Education and Healthcare:

Turkey has seen big improvements in education and health in recent years. The Turkish government has spent more money on education and built more schools and universities across the country.

For health, they started programs to include more people in health insurance and to make the health services at hospitals and local health centers better. They also focused on training medical workers and getting new equipment.

Also, leading European countries like Finland (for education) and Germany and the Nordic countries (for health) did well by having good plans. They put a lot of money into schools and hospitals, made school lessons that help kids think and be creative, and gave teachers and doctors great training. They also made sure everyone could get education and health services, no matter how rich they were or where they lived. They did this by giving money, making it easier to get to distant places, and helping people with special needs.

The "Decent Life in Egypt" Plan and Equal Chances: The "Decent Life in Egypt" plan (حياه كريمه) is a big national project to make life better for people in the poorest villages. It really focuses on improving things like schools and health centers. They're building new schools, fixing old ones, providing equipment for health units, and bringing in medical staff to give better services to people there. This helps make sure everyone has a fair shot at good education and healthcare.

Third: Ways to Make Things Better:

In Education:

- Spend more money on school buildings.
- Make classes smaller.
- Give schools more new learning tools and tech.
- Make teacher training more useful and up to date.
- Change what's taught to match job needs.

- Help students and parents see why education matters.
- Make sure all schools have good internet.
- Hire more teachers for the subjects that need them.
- Let local school groups and the community help education.

In Health:

- Spend more money on health.
- Spread health services out more evenly.
- Hire more doctors, nurses, etc., and encourage them to work where needed.
- Always have enough medical equipment and supplies.
- Make local health programs stronger.
- Start big campaigns to teach people about health.
- Use technology to give health advice from a distance.
- Check how well hospitals and clinics are doing.
- Support programs that help prevent and treat diseases early.

Applying What We Learned in Assiut Governorate: To use the good ideas from Turkey and European countries in Assiut, we can focus on:

- **More Money:** Put more of the budget into improving schools and hospitals in Assiut, especially in the areas that need it most.
- **Better Quality:** Work on making education better with good teacher training and updated lessons. For health, improve the services and get new equipment.
- **Easier Access:** Help people in far-off areas get to schools and clinics by using mobile services or making transportation easier.
- **Community Help:** Encourage local groups and businesses to help the government make education and health equal for everyone.
- **Using Tech:** Use technology for online learning and medical advice and create computer systems to manage these things better.

6- improve the regulation of global financial markets and institutions

We must discuss a very important point which is the transactions taxes and oversight institutions with large payments

Surely money is a key factor that makes a difference between people, and it is an important cause for inequality between people.

So, we had to reduce the gap between the people and redistribute the money fairly.

From the causes of unfair money distribution is the presence of a lot of money with some people in illegal ways , and if this money was traced and redistributed fairly among those who need it , this will help to reduce the gap between poor and rich . So, we had to apply laws that insight into the transactions of these big companies.

Also, immigrants who works abroad (especially in middle eastern countries) have most of their money in the form of foreign currencies and they trade this Money by illegal way in the black market . This leads to lack of this currencies in the banks and increases the commission of this immigrants which increases the gap .

We could impose more taxes on people who transfer a lot of money and decrease the imposed taxes on those who transfer a small amount of money.

Conclusion

Egyptian citizens still experience a huge inequality between themselves, and the areas where they reside. Which affects key elements in their lives ranging from income, career, services, their social life, education and healthcare.

This is all due to several factors in play, mainly the poor economy the country is currently facing, but reasons such as outdated traditions in upper Egypt and rural areas, insufficient infrastructure, the lack of policies put in place that protect a wide range of people from women, immigrants and those with special needs, and the unequal distribution of the Egyptian labor market, all participate in the vast difference in the life of the average Egyptian.

Fortunately, it has been proven that reducing inequalities within the country is not impossible, as seen with countries such as Brazil, Singapore, Iceland and Saudi Arabia. Not to mention the already running governmental projects, including "حياه كريمه" and also "تكافل وكرامه". But with a country as big as Egypt, achieving such goal may not be an easy task and will take a huge amount of planning, funding and time to be done.
